Innovative Roof Box

More organized, better handling

Problem description:

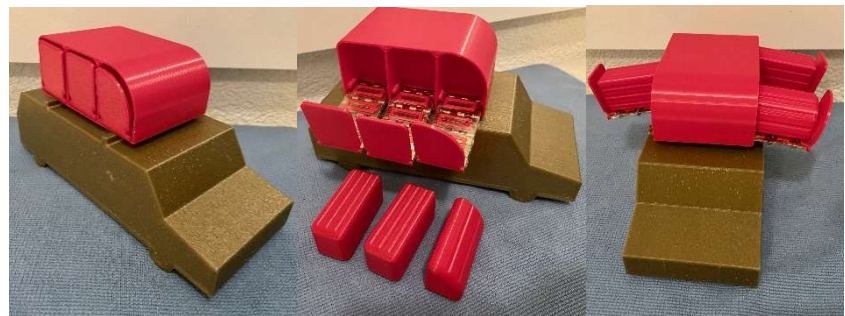

Roof boxes currently available on the market are too bulky, cumbersome and impractical, as there is only one large loading space in which the luggage can fly back and forth. In addition, loading and unloading current roof boxes is also problematic; you either have to climb a ladder or the side sill of the car to reach the box.

The new solution:

With the new solution, standard suitcases (possibly slightly modified) can be easily, conveniently and safely transported on a car and removed again in the same way. The luggage can be packed and filled conveniently at home or in the hotel room and then simply inserted into the new roof box from both sides.

This results in clear added value for the user.

In the technical implementation of the box, emphasis should be placed on an aerodynamically optimized and flatter design!

Advantages:

- Easy to use
- Individual items of luggage can be easily inserted into the roof box system.
- More order in the roof box
- No slipping of luggage items during the journey.

⇒ Innovation with unique selling points, patent protected!

⇒ High customer benefit

Licencee or property right buyer wanted!
